Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the

application:

Listing of Claims:

Claim 1. (Currently Amended) A vertical machining center comprising:

a tool slide which can be moved in a controlled manner;

a workpiece feed on one side of a machining area; and

a moveable vertical machining center component that can be controlled in

at least one axis to change workpieces between the workpiece feed and the

machining area;

said workpiece feed being adapted to hold available and accept workpiece

holders with workpieces and being mounted so as to be in alignment with a CNC

rotary table on that side of the vertical machining center, on which the

respective workpiece holder is held by the CNC rotary table, and wherein the

CNC rotary table is movable on guides in a direction of the workpiece feed such

that the CNC rotary table is directly contactable with the workpiece holders to

change the workpiece holders.

Claim 2. (Original) A vertical machining center, as claimed in claim 1,

wherein the workpiece feed comprises a magazine, the movement of which can be

timed and which has a plurality of receivers for workpiece holders.

Claim 3. (Original) A vertical machining center, as claimed in claim 2,

wherein the workpiece feed comprises a magazine wheel which carries the

receivers and can be swiveled about a central axis.

Claim 4. (Cancelled)

Docket No: 100975.53348US Page 2 of 7 RLG/mns

Appl. No. 10/803,096 Amdt. Dated 09/28/2005 Reply to Office Action of 06/30/2005

Claim 5. (Currently Amended) A vertical machining center, as claimed in claim 1 elaim 4, further comprising a counter-vise to hold the tool-carrier workpiece holder on the side, facing the workpiece feed and facing away from the CNC rotary table, said counter-vise being mounted so as to be traversable with the workpiece holder out of the collision area.

Claim 6. (Currently Amended) A vertical machining center, as claimed in claim 1, elaim 4, wherein the further comprising a counter-vise has that includes a holder for clamping the workpiece earrier holder, which is designed for swiveling the respective workpiece earrier holder 180° between a position facing the CNC rotary table and a position facing the workpiece feed, and the counter-vise is traversable on guides in the direction of the workpiece feed.

Claim 7. (Currently Amended) A vertical machining center, as claimed in one of claims 1-3, wherein to move the CNC rotary table or the <u>a</u> counter-vise, the tool slide and the CNC rotary table or the counter-vise have docking means.

Claim 8. (Original) A vertical machining center, as claimed in one of claims 1-3, wherein the tool slide has a gripper to change the workpiece holders.
